## GLOBAL X ETFs RESEARCH

# Monthly Covered Call Commentary

The Global X Research Team is pleased to release the distribution and premium numbers for our covered call ETFs for September 2023. Global X's Covered Call suite of ETFs generally invest in the underlying securities of an index and sell call options on that index, an ETF tracking the underlying equity index, or a similar equity index. These strategies are designed to provide investors with an alternative source of income, while offering different sources of risks and returns to an income-oriented portfolio.

[Click here to download the September 2023 Covered Call Report](#)

During the most recent roll period for the Global X Covered Call suite, running from August 18<sup>th</sup> to September 15<sup>th</sup>, the major U.S. equity indices rose in market value. Nvidia's considerable earnings beat coupled with the Federal Reserve's relatively dovish tone at last month's Jackson Hole Economic Symposium led to an expression of positive market sentiment from investors.<sup>1,2</sup> Indeed, the optimistic news stoked confidence that economist calls for a soft landing may come to fruition.

In this context, volatility markers that depict the expected movements of the broader markets experienced a reversal of fortune from the upward trends they exhibited during last month's roll period. In fact, the VIX and VXN volatility indexes, measuring implied volatility for the S&P 500 and Nasdaq 100, respectively, maintained fairly consistent negative trajectories. The former bottomed out at a 3-year low on September 14<sup>th</sup> at 12.79, while the VXN hit a nadir of 17.01.<sup>3</sup> Consequently, the premiums obtained by the Global X Covered Call products came under pressure in the month of September, though QYLD and QYLE still provided a distribution up to their 1% cap level.

Sep 2023	2.17%	1.01%	0.95%	0.48%

<sup>1</sup>As a general guideline, the monthly distribution of QYLD, XYLD, RYLD, DJIA, QYLE & XYLE is approximately capped at the lower of: a) half of premiums received, or b) 1% of net asset value (NAV). For QYLG, XYLG, RYLG, DYLG, TYLG, HYLG, & FYLG, the monthly distribution is approximately capped at the lower of: a) half of premiums received, or b) 0.5% of net asset value (NAV). The excess amount of option premiums received, if applicable, is reinvested into the fund. Year-end distributions can exceed the general guideline due to capital gains that are paid out at the end of the year.

### Glossary

**S&P 500:** S&P 500 Index tracks the performance of 500 leading U.S. stocks and captures approximately 80% coverage of available U.S. market capitalization. It is widely regarded as the best single gauge of large-cap U.S. equities.

**Nasdaq 100:** The Nasdaq-100 Index includes 100 of the largest domestic and international non-financial companies listed on The Nasdaq Stock Market based on market capitalization. The Index reflects companies across major industry groups including computer hardware and software, telecommunications, retail/wholesale trade and biotechnology. It does not contain securities of financial companies including investment companies.

**Dow Jones Industrial Average:** The index is a price-weighted measure of 30 U.S. blue-chip companies. The index includes all industries except transportation and utilities.

**Russell 2000:** The Russell 2000 Index is a U.S. small-cap stock market index of the bottom 2,000 stocks in the Russell 3000 Index. The index is maintained by FTSE Russell, a subsidiary of the London Stock Exchange Group.

**VXN:** The Cboe Nasdaq-100 Volatility Index, commonly referred to as the VXN, reflects a market estimate of future volatility of the Nasdaq-100 index, based on the weighted average of implied volatilities of the Nasdaq 100.

**VIX:** The CBOE Volatility Index, commonly referred to as the VIX, reflects a market estimate of future volatility of the U.S. stock market, based on the weighted average of the implied volatilities of the S&P 500.

---

Investing involves risk, including the possible loss of principal. Concentration in a particular industry or sector will subject the Funds to loss due to adverse occurrences that may affect that industry or sector. Investors in the Funds should be willing to accept a high degree of volatility in the price of the fund's shares and the possibility of significant losses.

The Funds engages in options trading. An option is a contract sold by one party to another that gives the buyer the right, but not the obligation, to buy (call) or sell (put) a stock at an agreed upon price within a certain period or on a specific date. A covered call option involves holding a long position in a particular asset and writing a call option on that same asset with the goal of realizing additional income from the option premium. By selling covered call options, the Funds limit their opportunity to profit from an increase in the price of the underlying index above the exercise price, but continue to bear the risk of a decline in the index. A liquid market may not exist for options held by the fund. While the fund receives premiums for writing the call options, the price it realizes from the exercise of an option could be substantially below the index's current market price. QYLD, QYLE, DJIA, QYLG, DYLG, TYLG, HYLG, and FYLG are non-diversified.

Companies with favorable ESG attributes may underperform the stock market as a whole. As a result, QYLE and XYLE may underperform other funds that do not screen companies based on ESG attributes. The criteria used to select companies for investment may result in the Fund investing in securities, industries or sectors that underperform the market as a whole, forgoing opportunities to invest in securities that might otherwise be advantageous to buy or underperform other funds screened for ESG standards.

Index returns are for illustrative purposes only and do not represent actual fund performance. Index returns do not reflect any management fees, transaction costs or expenses. Indices are unmanaged and one cannot invest directly in an index. Past performance does not guarantee future results.

Shares of ETFs are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Brokerage commissions will reduce returns.
