

Covered Call Report

September 2024

Key Takeaways

Takeaway 1 – Premium Values Remained Elevated as a Product of Maintained Volatility

During the September roll period for the Global X suite of covered call products, which ran from August 16th, 2024 to September 20th, 2024, premiums associated with the single call options that were written by funds that harness the S&P 500, Nasdaq 100, and Russell 2000 as their equity indexes took a step back on a sequential basis. That said, relative to the call options that were written by the funds over the last year, these premiums remained in the upper quartile, supported by the elevated volatility trend that kicked off in mid-July. Indeed, in the September roll period the Cboe Volatility Index (VIX) only closed below 15 one time, and implied volatility associated with the Nasdaq 100 was similarly accommodating after the index lost about 5.5% of its value over the first three weeks of the term.^{1,2}

Takeaway 2 – The Nasdaq 100 Delivered a Flat Performance, as Markets Repositioned Away from “Risk-On” Assets

While all four of the major domestic equity indices recorded an intra-roll-period trough on September 6th, the Nasdaq 100 went on to recoup the least of its value before options expired on September 20th. On the whole, it recorded total returns of 1.54% during the September roll, and en route to this performance it witnessed widely fluctuating pricing patterns, illustrated by a Nasdaq 100 Volatility Index (VXN) that established its second-highest peak in the last year.³ While the market was flat, the volatility contributed to increased premiums, which supported The Global X Nasdaq 100 Covered Call ETF (QYLD).

Takeaway 3 – Interest Rates Aren’t the Only Thing Driving Volatility

As the September roll period trended toward its conclusion, speculation over, and the subsequent realization of, a 50-basis-point federal funds rate cut had a pacifying impact on market volatility.⁴ The decline was noteworthy, with the VIX contracting off its highest peak since August 8th. However, with the first rate cut in the books and CME pricing in an 80% chance of two 25-basis-point rate cuts over the balance of the year, the VIX holding firm above the 15 level suggests uncertainty is stemming from other forces like the U.S. Presidential election and geopolitics.⁵

Volatility Remains Below Historic Averages, But Put Buying is Picking Up

Although market implied volatility has a tendency to ebb and flow over time, a snapshot of the major domestic volatility indexes at the conclusion of the September roll period indicates that investors are expecting markets to trade less widely in value over the coming 30 days than they have in the past. The weekly ratio of index puts to calls, however, show investors exhibiting a more defensive attitude, of late, suggesting writing call options rather than going long stock might be an appealing opportunity.

³12-Trailing Month Premium data is measured 10/20/2023 to 9/20/2024. ⁴These funds typically earn income dividends from stocks and options premiums. Net of expenses, the dividend income from stocks are typically passed along to the shareholders of these same funds as dividends from net investment income. The option premium reduces the cost of the option. The Funds realize capital gains from writing options and capital gains or losses whenever it sells securities. Any net realized long-term capital gains are distributed to shareholders as "capital gain distributions". A portion of the distribution is estimated to include a return of capital. For information on the breakdown of the distributions, please see the [Tax Supplements](#). These do not imply rates for any future distributions.

The performance data quoted represents past performance. Past performance does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than their original cost and current performance may be lower or higher than the performance quoted.

Source: Global X ETFs and Morningstar Direct as of 9/30/2024. ¹All returns over 1-Year are annualized. ²XYLG data from 9/18/2020; QYLG, 9/18/2020; RYLG, 10/4/2022; DYLG, 7/25/2023; TYLG, 11/21/2022; HYLG, 11/21/2022; FYLG, 11/21/2022. ³Global X ETFs, 12-Trailing Month Premium data is measured from 10/20/2023 to 9/20/2024. For funds in existence for less than one year, figure represents cumulative premiums through period end. ⁴These funds typically earn income dividends from stocks and options premiums. Net of expenses, the dividend income from stocks-are typically passed along to the shareholders of these same funds as dividends from net investment income. The option premium reduces the cost of the option. The Funds realize capital gains from writing options and capital gains or losses whenever it sells securities. Any net realized long-term capital gains are distributed to shareholders as "capital gain distributions". A portion of the distribution is estimated to include a return of capital. For information on the breakdown of the distributions, please see the [Tax Supplements](#). These do not imply rates for any future distributions.

The performance data quoted represents past performance. Past performance does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than their original cost and current performance may be lower or higher than the performance quoted. Performance current to the most recent month-end is available at globalxetfs.com

Global X Covered Call & Growth ETFs – 50% Covered Strategies

The Global X Nasdaq 100 Covered Call & Growth ETF (QYLG) and the Global X S&P 500 Covered Call & Growth ETF (XYLG) received premiums of **1.11%** and **0.80%** in the September roll period, and distributed 0.56% and 0.40% of their NAV, respectively.

QYLG PREMIUMS AND DISTRIBUTIONS

XYLG PREMIUMS AND DISTRIBUTIONS

As a general guideline, the monthly distributions of QYLG and XYLG are approximately capped at the lower of a) half of premiums received or b) 1% of net asset value (NAV). The excess amount of option premiums received, if applicable, is reinvested into the fund. Year-end distributions can exceed the general guideline due to capital gains that are paid out at the end of the year. Past performance is not a guarantee of future results. Future distributions are not guaranteed. For a full history of fund premiums and distributions, please visit [our site](#). For performance data current to the most recent month- or quarter-end or a copy of the fund prospectus please visit [QYLG](#) and [XYLG](#) fund pages.

Global X Covered Call & Growth ETFs – 50% Covered Strategies

Option Terminology

Term	Description	Term	Description
Call Option	An option that gives the holder the right to buy an underlying asset from another party at a fixed price over a specific period of time.	Moneyness	A measure of intrinsic value of an option, that is, it will tell the option holder whether exercising the option will be profitable.
Put Option	An option that gives the holder the right to sell an underlying asset to another party at a fixed price over a specific period of time.	At-the-Money	An option in which the underlying's price equals the strike price.
Long Call	A position in a call option contract in which one has the exercisable right under the contract. This position reflects a bullish attitude.	In-the-Money	Options that, if exercised, would result in the value received being worth more than the payment required to exercise.
Short Call	A position in a call option contract one has in which the right under the contract can be exercised against oneself. This reflects bearish attitude.	Out-of-the-Money	Options that, if exercised, would require the payment of more money than the value received and therefore would not be currently exercised.
Long Put	A position in a put option contract in which one has the exercisable right under the contract. This reflects bearish attitude.	Cboe Index Option Put/Call Ratio	Measures the ratio between the volume of all index put options and all index call options being traded on a daily basis.
Short Put	A position in a put option contract one has in which the right under the contract can be exercised against oneself. This reflects bullish attitude.	Premium	The amount of money a buyer pays and seller receives to engage in an option transaction.
Market Price	The current price of the underlying asset of the option contract, such as a stock.	Covered Call	An option strategy involving the holding of an asset and sale of a call option on the same asset.
Strike Price	The fixed price at which an option holder can buy or sell the underlying asset. Also called 'exercise price'.	Expiration Date	This is the day an options contract ceases to exist.

Terminology (continued)

Term	Description	Term	Description
Cboe Volatility Index	Commonly referred to as VIX, reflects a market estimate of future volatility of the U.S. stock market, based on the weighted average of the implied volatilities of the S&P 500.	Cboe Nasdaq-100 Volatility Index	Measures the market's expectation of 30-day volatility implicit in the prices of near-term Nasdaq-100 Options.
Cboe Russell 2000 Volatility Index	Measures the market's expectation of 30-day volatility implicit in the prices of near-term Russell 2000 Options.	Cboe DJIA Volatility Index	Measures the market's expectation of 30-day volatility implicit in the prices of near-term Dow Jones Industrial Average Options.
Open Interest	The total number of outstanding derivative contracts that have not yet been settled.	Implied Volatility	The market's expectation of how much an underlying asset's price will fluctuate in the future, typically derived from the pricing of options contracts on that same asset.
Health Care Select Sector SPDR Fund (XLV)	A sector-specific ETF designed to track the performance of, and provide investors exposure to, companies in the Health Care space.	Financials Select Sector SPDR Fund (XLF)	A sector-specific ETF designed to track the performance of, and provide investors exposure to, companies in the Financials space.
Cboe S&P 500 Dispersion Index	Measures the expected dispersion of the S&P 500 over the next thirty days, as calculated from the prices of S&P 500 index options and the prices of single stock options of S&P 500 constituents, using a modified version of the VIX methodology.	Cboe 3-Month Implied Correlation Index	Measures the average expected correlation between the top 50 stocks in the S&P 500 Index using a combination of at-the-money S&P 500 Index and component option implied volatilities.
12-Trailing Month Distributions	The distribution rate an investor would have received if they had held the fund over the last twelve months, assuming the most recent NAV. The 12-Trailing Month distribution is calculated by summing any income, capital gains, and return of capital distributions over the past twelve months and dividing by the sum of the most recent NAV and any capital gain distributions made over the same time period.		

Important Information

Important Information

Investing involves risk, including the possible loss of principal. Concentration in a particular industry or sector will subject the Funds to loss due to adverse occurrences that may affect that industry or sector. Investors should be willing to accept a high degree of volatility in the price of the fund's shares and the possibility of significant losses.

The Funds engage in options trading. An option is a contract sold by one party to another that gives the buyer the right, but not the obligation, to buy (call) or sell (put) a stock at an agreed upon price within a certain period or on a specific date. A covered call option involves holding a long position in a particular asset and writing a call option on that same asset with the goal of realizing additional income from the option premium. By selling covered call options, the funds limit their opportunity to profit from an increase in the price of the underlying index above the exercise price, but continues to bear the risk of a decline in the index. A liquid market may not exist for options held by the fund. While the fund receives premiums for writing the call options, the price it realizes from the exercise of an option could be substantially below the indices current market price.

Companies with favorable ESG attributes may underperform the stock market as a whole. As a result, QYLE and XYLE may underperform other funds that do not screen companies based on ESG attributes. The criteria used to select companies for investment may result in the Fund investing in securities, industries or sectors that underperform the market as a whole, forgoing opportunities to invest in securities that might otherwise be advantageous to buy or underperform other funds screened for ESG standards.

International investments may involve risk of capital loss from unfavorable fluctuation in currency values, from differences in generally accepted accounting principles, or from economic or political instability in other nations. Emerging markets involve heightened risks related to the same factors as well as increased volatility and lower trading volume.

Investments in securities of MLPs involve risk that differ from investments in common stock including risks related to limited control and limited rights to vote on matters affecting the MLP. MLP common units and other equity securities can be affected by macro-economic and other factors affecting the stock market in general, expectations of interest rates, investor sentiment towards MLPs or the energy sector, changes in a particular issuer's financial condition, or unfavorable or unanticipated poor performance of a particular issuer (in the case of MLPs, generally measured in terms of distributable cash flow). MLPD invests in the energy industry, which entails significant risk and volatility. Small and mid-capitalization companies may pose greater risks than large companies. The MLPD also expects to pay distributions, which will be treated as a return of capital for tax purposes rather than from net profits and shareholders should not assume that the source of distributions is from the net profits of the Fund.

Neither MLPD nor the Adviser has control over the actions of underlying MLPs. The amount of cash that each individual MLP can distribute to its partners will depend on the amount of cash it generates from operations, which will vary from quarter to quarter depending on factors affecting the energy infrastructure market generally. Available cash will also depend on the MLPs' level of operating costs (including incentive distributions to the general partner), level of capital expenditures, debt service requirements, acquisition costs (if any), fluctuations in working capital needs, and other factors. The MLP holdings of the underlying fund expect to generate significant investment income, and the underlying fund's investments may not distribute the expected or anticipated levels of cash, resulting in the risk that the fund may not have the ability to make cash distributions as investors expect from MLP-focused investments. Past distributions are not indicative of future distributions. There is no guarantee that dividends will be paid.

QYLD, QYLE, DJIA, QDCC, MLPD, QYLG, DYLG, TYLG, HYLG, and FYLG are non-diversified.

Important Information (Continued)

Shares of ETFs are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Brokerage commissions will reduce returns. Beginning October 15, 2020, market price returns are based on the official closing price of an ETF share or, if the official closing price isn't available, the midpoint between the national best bid and national best offer ("NBBO") as of the time the ETF calculates current NAV per share. Prior to October 15, 2020, market price returns were based on the midpoint between the Bid and Ask price. NAVs are calculated using prices as of 4:00 PM Eastern Time. The returns shown do not represent the returns you would receive if you traded shares at other times. Indices are unmanaged and do not include the effect of fees, expenses or sales charges. One cannot invest directly in an index.

This material must be preceded or accompanied by the funds' current prospectuses. Please read the prospectus carefully before investing.
