

# The SuperDividend® Report

In times of economic uncertainty and historically low interest rates in fixed income assets, investors are searching for other sources of income to supplement their portfolios. As with all investments, it is important to diversify among asset classes to help ensure that you are not over-exposed to a single geography, industry, or asset class. To help investors diversify their income sources, we have developed a suite of income-producing ETFs designed to be transparent, cost-effective and seamlessly added to an existing portfolio.

*The performance data quoted represents past performance. Past performance does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than their original cost and current performance may be lower or higher than the performance quoted. For performance data current to the most recent month end, please call 1-888-493-8631, or visit [globalxetfs.com](http://globalxetfs.com).*

1. Distribution Yield: The annual yield an investor would receive if the most recent fund distribution remained the same going forward. The yield represents a single distribution from the fund and does not represent total return of the fund. The distribution yield is calculated by annualizing the most recent distribution and dividing by the NAV.
2. 12-Month Dividend Yield: The yield an investor would have received if they had held the fund over the last twelve months assuming the most recent NAV. The 12-Month yield is calculated by summing any income distributions over the past twelve months and dividing by the NAV.
3. 30-Day SEC Yield: A standard yield calculation developed by the Securities and Exchange Commission that allows for fairer comparisons among funds. This figure reflects the interest earned during the period after deducting the fund's expenses for the period.

## INDEX DEFINITIONS

SOLSDIV	The Solactive Global SuperDividend Index tracks the performance of 100 equally weighted companies that rank among the highest dividend yielding equity securities in the world.
DIVT	The INDXX SuperDividend U.S. Low Volatility Index tracks the performance of 50 equally weighted common stocks, MLPs and REITs that rank among the highest dividend yielding equity securities in the United States.
ISDEMT	The Indxx SuperDividend Emerging Markets Index tracks the performance of 50 equally weighted companies that rank among the highest dividend yielding equity securities in emerging markets, as defined by Indxx. The components of the Underlying Index have paid dividends consistently over the last 2 years.
IALTY	The Indxx SuperDividend® Alternatives Index tracks the performance of among the highest dividend yielding securities in each category of alternative investments, as defined by the Index Sponsor. The underlying Index may include exposure to the following classes of alternative investments: MLPs, infrastructure companies, REITs, mortgage REITs, emerging market debt and currency trading, business development companies ("BDCs"), private equity, asset and mortgage backed securities, and option-writing strategies. The Underlying Index may include ETFs and closed-end funds ("CEFs") that provide access to one or more of these categories of alternative investments.
SRET	The Solactive Global SuperDividend® REIT Index tracks the performance of Real Estate Investment Trusts ("REITs") that rank among the highest yielding REITs globally, as determined by the Index Provider. The Underlying Index is maintained by Solactive AG.
M1CXGXC	The MSCI EAFE Top 50 Dividend Index tracks the performance of 50 of the highest yielding equity securities from international developed markets across Europe, Australasia, and the Far East.
SPXQHDUT	The S&P 500® Quality High Dividend Index measures the performance of S&P 500 stocks that exhibit both high quality and high dividend yield characteristics. Index constituents are equally-weighted, subject to a 25% Global Industry Classification Standard (GICS) Sector weight cap.

Investing involves risk, including the possible loss of principal. International investments may involve risk of capital loss from unfavorable fluctuation in currency values, from differences in generally accepted accounting principles or from economic or political instability in other nations. Emerging markets involve heightened risks related to the same factors as well as increased volatility and lower trading volume. Narrowly focused investments typically exhibit higher volatility.

Diversification may not protect against market loss.

High yielding stocks are often speculative, high risk investments. These companies can be paying out more than they can support and may reduce their dividends or stop paying dividends at any time, which could have a material adverse effect on the stock price of these companies and the Fund's performance. There is no guarantee that dividends will be paid.

The potential benefits of investing in MLPs depend on them being treated as partnerships for federal income tax purposes. Further, if the MLP is deemed to be a corporation then its income would be subject to federal taxation at the entity level, reducing the amount of cash available for distributions to the fund which could result in a reduction of the fund's value. The risks associated with real estate investment trusts including interest rate risk which may cause certain REIT holdings to decline in value if interest rates increase. REITs are subject to general risks related to real estate including default risk and the possibility of decreasing property values. Real estate is highly sensitive to general and local economic conditions and developments, and characterized by intense competition and periodic overbuilding. Many real estate companies, including REITs, utilize leverage (and some may be highly leveraged), which increases risk and could adversely affect a real estate company's operations and market value in periods of rising interest rates.

EFAS may invest in mid-capitalization companies, which pose greater risks than large companies.

ALTY may invest in MLPs, infrastructure investments, REITs, mortgage REITs, preferred stocks, currency trading, actively-managed and covered call strategies and therefore may be subject to all underlying risks.

ALTY may invest in derivatives, which are often more volatile than other investments and may magnify the Fund's gains or losses.

QDIV is non-diversified.

This information is not intended to be individual or personalized investment or tax advice. Please consult a financial advisor or tax professional for more information regarding your tax situation. The fund is required to distribute income and capital gains which may be taxable. Buying and selling shares will result in brokerage commissions and tax consequences. Shares are only available through brokerage accounts which may have minimum requirements.

Shares are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Brokerage commissions will reduce returns. Global X NAVs are calculated using prices as of 4:00 PM Eastern Time. Beginning October 15, 2020, market price returns are based on the official closing price of an ETF share or, if the official closing price isn't available, the midpoint between the national best bid and national best offer ("NBBO") as of the time the ETF calculates current NAV per share. Prior to October 15, 2020, market price returns were based on the midpoint between the Bid and Ask price. The returns shown do not represent the returns you would receive if you traded shares at other times.
